

Componente Curricular: Química

Professor: Maurício Y. e Thatiane

Assunto: 1P - Termoquímica - Parte 2 - Lista de Exercícios - Extras

Data: 09/04/26

Série: 2º Ano

Termoquímica - Parte 2 - Lista de Exercícios - Extras

1) Equacione as reações de formação das substâncias solicitadas e para isso utilize como reagentes somente substâncias simples no estado padrão.

a) $\text{H}_2\text{O}(\ell)$ b) $\text{CO}_2(\text{g})$ c) $\text{CO}(\text{g})$ d) $\text{NH}_3(\text{g})$ e) $\text{NaCl}(\text{s})$ f) $\text{MgO}(\text{s})$ g) $\text{CaCl}_2(\text{s})$ h) $\text{CH}_4(\text{g})$ i) $\text{SO}_2(\text{g})$

2) Escreva as reações químicas de formação das substâncias abaixo, usando como reagentes apenas substâncias simples a 25°C e 1 atm.

a) $\text{SO}_3(\text{g})$ b) $\text{CaF}_2(\text{s})$ c) $\text{FeBr}_3(\text{s})$ d) $\text{Al}_2\text{O}_3(\text{s})$ e) $\text{HCl}(\text{g})$ f) $\text{K}_2\text{O}(\text{s})$ g) $\text{HgO}(\text{s})$

3) Faça a montagem, com auxílio dos reagentes que são substâncias simples na condição de maior estabilidade, das reações que objetivam a formação das substâncias compostas abaixo:

a) $\text{H}_2\text{O}_2(\ell)$ b) $\text{HNO}_3(\ell)$ c) $\text{H}_2\text{SO}_4(\ell)$ d) $\text{H}_3\text{PO}_4(\text{s})$ e) $\text{NaNO}_3(\text{s})$ f) $\text{K}_2\text{SO}_4(\text{s})$

g) $\text{Ca}_3(\text{PO}_4)_2(\text{s})$ h) $\text{Al}_2(\text{SO}_4)_3(\text{s})$ i) $\text{Ca}(\text{OH})_2(\text{s})$ j) $(\text{NH}_4)_2\text{CO}_3(\text{s})$

Resoluções

1)

2)

3)
