

ATIVIDADE DE APOIO – ENSINO MÉDIO

Componente Curricular: Física

Professor (a): Rosana

Assunto (s): Soma, Diferença e Decomposição de Vetores - Exercícios

Data: Abril

Série: 1

1- Dados os vetores abaixo, represente graficamente o vetor diferença pedido e determine o seu módulo.

a)  $\vec{d} = \vec{y} - \vec{x}$
 $|\vec{x}| = 5 \text{ u.m.}$
 $|\vec{y}| = 3 \text{ u.m.}$

b)  $\vec{d} = \vec{a} - \vec{b}$
 $|\vec{a}| = 4 \text{ u.m.}$
 $|\vec{b}| = 2 \text{ u.m.}$

c)  $\vec{d} = \vec{b} - \vec{a}$
 $|\vec{a}| = 4 \text{ u.m.}$
 $|\vec{b}| = 3 \text{ u.m.}$

2- No plano quadriculado a seguir estão representados dois vetores $\vec{a}$ e $\vec{b}$.

Determine:

a) o módulo da soma desses vetores

b) o módulo da diferença $\vec{d} = \vec{b} - \vec{a}$

3- Determinar os módulos dos vetores resultados, dados abaixo.

a) $\vec{R} = \vec{a} - \vec{b} - 0,5 \cdot \vec{c}$;

b) $\vec{R} = -0,5 \cdot \vec{a} + \vec{b} + \vec{c}$.

4- Determinar o módulo do vetor resultado dado abaixo.

$$\vec{R} = 2.\vec{a} - 2.\vec{b} + \frac{\vec{c}}{2}.$$

5- Dados os vetores da figura, represente graficamente cada vetor pedido e calcule seus módulos. Cada lado dos quadradinhos mede 1 u.m.

a) $\vec{A} = \vec{a} + \vec{b} + \vec{d}$

c) $\vec{M} = 2.\vec{a} + 3.\vec{c}$

b) $\vec{B} = \vec{b} + \vec{c} + \vec{d}$

d) $\vec{N} = 2.\vec{b} + \vec{c} - 4.\vec{d}$

6- Na figura, o vetor $\vec{v}$ tem módulo igual a 10 u.m.. Determine os módulos das componentes $\vec{v}_x$ e $\vec{v}_y$.

Dados: $\sin 30^\circ = \frac{1}{2}$; $\cos 30^\circ = \frac{\sqrt{3}}{2}$

7- Sabe-se que o vetor $\vec{A}$ da figura abaixo tem módulo de 20 cm, calcule as intensidades das projeções desse vetor nos eixos x e y.

Dados: $\sin 45^\circ = \cos 45^\circ = \frac{\sqrt{2}}{2}$

Respostas

1-

$$|\vec{d}| = 2 \text{ u.m.}$$

b)

$$|\vec{d}| = 6 \text{ u.m.}$$

c)

$$|\vec{d}| = 5 \text{ u.m.}$$

2-

a)

$$|\vec{s}| = 10 \text{ u.m.}$$

b)

$$|\vec{s}| = 2\sqrt{37} \text{ u.m.}$$

3- a)

$$|\vec{R}| = 5 \text{ cm}$$

b)

$$|\vec{R}| = 5 \text{ cm}$$

4-

$$|\vec{R}| = 5 \text{ u.m.}$$

5-

a)

$$|\vec{A}| = 3\sqrt{5} \text{ u.m.}$$

b)

$$|\vec{B}| = 2\sqrt{17} \text{ u.m.}$$

c)

$$|\vec{M}| = 2\sqrt{41} \text{ u.m.}$$

d)

$$|\vec{N}| = 20 \text{ u.m.}$$

6- $v_x = 5 \cdot \sqrt{3} \text{ u.m.}$ e $v_y = 5 \text{ u.m.}$

7- $v_y = v_x = 10 \cdot \sqrt{2} \text{ cm}$
